

<h1>OPERATION GUIDE</h1>  <p>01</p>	<h3>Before wearing</h3>  <p>Please use a cotton swab to clean the ear canal before wearing. If the cerumen is too much, it will block the sound outlet of the product and cause no sound.</p> <p>02</p>	<h3>How to wear</h3>  <p>1. Choose earplugs that fit your ear canal size. 2. Install the selected earplugs to the machine. 3. Wear it correctly as shown. 4. Adjust the volume of hearing aid</p> <p>03</p> <p>04</p>	<p>Note: Be sure to choose earplugs that fit your ear canal and wear them correctly to fit your ears as much as possible. If you don't wear it properly, there will be echoes (whistles/sounds).</p> <h3>Problems encountered in wearing</h3> <ol style="list-style-type: none"> 1. There is no sound when wearing? ① Check whether the volume level is adjusted to suitable for your hearing ② Check whether the hearing aid has power ③ Whether there is earwax in the ear canal, because the earwax is easy blocked the sound of the hearing aid
--	---	--	---

<h3>Volume control</h3>  <p>As shown in the picture: lightly press the M button to adjust the volume, there are 5 levels of volume, and the volume level is 1—5 cyclic adjustment; Touch once, increase the volume by one level, when you hear the "beep" it means the volume has reached the maximum level. * When adjusting the volume, please do not cover the sound pickup hole above</p> <p>09</p>	<h3>Charging</h3> <p>Charging compartment Display number flashing=charging Display number show 100= charging is completed Hearing aid Green icon flashing= charging Green icon turn off= charging is completed It can work 6 hours if connected with Bluetooth, and work 10 hours if not. The charging compartment can be used to charge one hearing aid 4 times</p>  <p>Charging</p>  <p>Charging completed</p> <p>10</p>	<h3>Charging</h3> <ol style="list-style-type: none"> 1. Charging the charging case: it can be charged through the power adapter or through the USB interface 2. Hearing aid charging: Put the hearing aids back to the charging case, it will be automatically charged 3. If the hearing aid and charging case are not used for a long time, the battery self-discharge will cause the battery to be seriously insufficient. It should be charged, and the charging time should reach 12 hours. Even if the charging indicator shows that the charging is complete, the charging should not be stopped (guaranteed to reach 12 hours) <p>11</p>	<p>4. During use, the hearing aid volume becomes low when the hearing aid is not in use, the power should be turned off and charged (this will better protect the hearing aid battery). This is very important! Otherwise, it will cause excessive discharge 5. The hazards of excessive battery discharge will reduce the battery capacity and affect the battery life to varying degrees 6. When using AC power to charge, if the charging is over, unplug the power line</p> <p>12</p>

<h3>21-day wear chart</h3> <h4>THE JOURNEY TO LISTENING</h4> <p>Unlike vision correction, which simply wears glasses, hearing correction is a rather detailed process. Once you start your hearing correction journey, you will experience countless "new sounds", and your brain needs to adapt for a period of time. In just a few weeks, you will be shocked by the sound that you have never experienced before.</p> <p>If you have any questions, we will serve you wholeheartedly.</p> <p>13</p>	<h4>THE FIRST WEEK</h4> <p>Some sounds may be too noisy when wearing a hearing aid for the first time, such as the buzzing of the refrigerator, the wrinkling of paper, or the sound of your footsteps. This is normal, and your brain is relearning how to prioritize these sounds that you don't hear very often. Sometimes you may not like the noise, but please don't give up wearing.</p> <p>Exercise Listen carefully to a song you are familiar with or watch a TV game show, and guess the answer without looking at the subtitles.</p> <p>14</p>	<h4>THE SECOND WEEK</h4> <p>The more you wear the hearing aid, the more you can adapt to the sound environment. You can even ask people around you not to speak loudly to you anymore, because you can easily communicate with people.</p> <p>Patient At the beginning, wear the hearing aid for 30 minutes a day, and then gradually increase the wearing time until the whole day.</p> <p>15</p>	<h4>THE THIRD WEEK</h4> <p>After a few weeks, you will feel more energetic because you no longer need to spend a lot of energy to listen to what others say. The sound will become clearer and clearer, and you will once again enjoy the sounds that surround you in your life, such as the melodious singing of birds in the backyard, the cheerful laughter of children, and the rustling of leaves in the wind.</p> <p>Participate Have a meal in a restaurant with friends, watch a movie in a theater, join a family gathering, and no longer have to be afraid to speculate about missed information.</p> <p>16</p>
